Installation Instruction

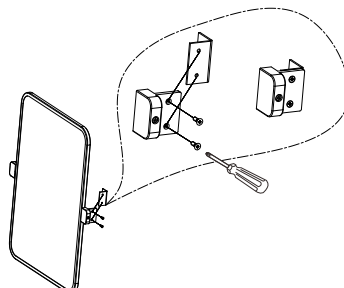

- ① Measure the distance A between two brackets and the distance B between two holes of the bracket.

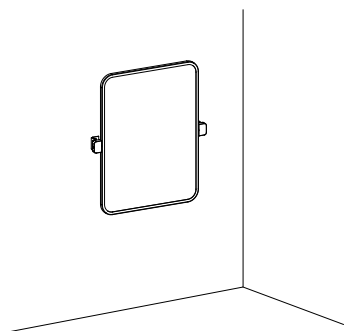

- ② Choose desired height (must keep the distance do not less than 30cm from wall), use a pencil to make 4 marks on the wall according to the measured sizes. Use a drill to drill holes

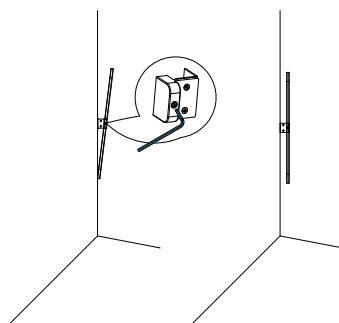

- ③ D6 expansion plug only use for solid wall) Put the D6 expansion plug into the drilled holes with a hammer, fix the iron plate onto the wall with screws

- ④ Fix the bracket on the iron plate with screws

- ⑤ Please ensure the mirror installed firmly
.and securely

- ⑥ Swing the mirror to see if it is smooth,
the bracket can be adjusted loosely or
.tightly by the hex wrench

Warm tip:

Please do not use, if the product have any bocken.

During operation, never put hard and sharp materials directly against the mirror surface.
